

## HW3 Applying Responsiveness and Table Based Design to Email with HTML and CSS

### Pros of Accessibility Tools:

- Good contrast and readable size for most users. (Body font is Arial, sans-serif with font-size:16p)

- Buttons have a clear visual focus (color change on hover)

- Help identify missing alt text on images.

```
<tr>
  <td align="center" class="hero" style="padding: 20px;">
    
  </td>
</tr>
```

- Using tables ensures proper structure in email clients and helps screen readers navigate content more predictably.

## Cons of Accessibility Tools:

- Headline text is white over a background image (May be low contrast depending on the image).

- `background="images/headline-bg.png"` may not render in some Outlook versions.
